

Managed Security

Savvy executives and regulators realize that monitoring and immediate response to security events is critical to protecting the organizations information and ensuring business continuance.

The Managed Security Service offered at **Alliance Daemon Computer Consulting** was designed to meet the monitoring, response, and reporting requirements of today's highly regulated industries.

The more complex our IT environments become, the more vulnerabilities there are to be exploited.

Unlike other security service providers, **Alliance Daemon Computer Consulting** implements a "layered approach" to enterprise security, focusing on more than just basic firewall and/or IDS monitoring. The company's unique approach serves to harden the enterprise by evaluating network traffic in all key applications, rather than relying only on alerts from perimeter defense systems.

We continuously monitor and actively defend your infostructure in real-time on a **24x7** basis to provide a more effective threat prevention solution. Because security breaches don't just happen between the hours of **9 to 5**, your infrastructure must be guarded on a **24/7/365** basis.

Alliance Daemon Computer Consulting offers a suite of Managed Security services designed to create a blanket of protection for your business.

For more information about *Managed Security* please contact sales at **(330)371-5107**.
